Blackboard (myBSC) Basics

myBSC houses all online course as well as materials for many other classes. To get started, go to https://mybsc.bryantstratton.edu, making sure to use either Firefox or Chrome as your internet browser. Do not use Internet Explorer.

Press the large, orange button near the middle of your computer screen to login:

![Login to myBSC]

On the next screen, enter your BID# as your username; your password is the same one that you use to log on to a campus computer or into your college email. Then press “LOGIN”.

![Enter your Username and Password]

The next screen should look similar to the image on the right. Look under “My Courses” on the upper left hand side of your computer screen for a list of your classes. The course names might look a little confusing; look at them carefully to determine which class is which.
Click the course title link to enter the course website. Once you have done so, you will see a screen similar to the image below:

Click “Meet Your Instructor” for basic information about your instructor, such as their email address, office location, phone number, etc.

Click “Introductory Documents” to view course syllabi and any other core documents that your instructor posted.

Click “Content” to access course content, such as weekly folders, discussions, assignments, lectures, readings, links, etc.

Click “My Grades” to view your grades for that course.

When you are done working in myBSC, it’s very important that you completely log out of myBSC and close your internet browser—especially when using a campus computer.

Logging Out:

It is critical to log out of myBSC properly. Closing the browser window does not properly log out of your session. When work is completed, please use the log out button in the upper right next to your username. If two browser windows are logged into myBSC, both browsers need to be correctly logged off. If one browser window is not logged off, when it reaches its session timeout you will be logged out of all of your active sessions whether using the browser or not.
